

Rohithraj Baskaran

baskaranrohithraj@gmail.com — github.com/rohithrajbaskaran — rohithrajbaskaranportfolio.vercel.app
linkedin.com/in/rohithraj-baskaran-89029820b/ — +1(647)425-4850 — Toronto, ON

Skills

Programming Languages: Python, Java, C#, JavaScript, TypeScript, SQL, C++, Bash

Backend Technologies: Node.js, Express.js, Flask, REST APIs, GraphQL, Microservices, JWT Auth, API Development

Frontend Technologies: React, Redux Toolkit, TypeScript, SASS, HTML, CSS

Databases & Other: PostgreSQL, MongoDB, Redis, Oracle, SQL Optimization, Database Design, AWS, Docker, CI/CD, GitHub Actions, Linux, Git, GitHub, Agile/Scrum, Cypress, Jest, JUnit, Supabase, Figma

Relevant Experience

Application Engineer — Plutus Consultancy

September 2025 – December 2025

Python, Flask, PostgreSQL, pgvector, React, Linux, REST APIs

- Designed, developed, and maintained production-grade backend services and REST APIs for cloud-hosted applications running in Linux environments.
- Built an AI-powered semantic search platform using Flask, PostgreSQL, and pgvector, reducing incident investigation time by 20%+ through intelligent similarity matching.
- Automated operational workflows and data ingestion pipelines, reducing manual processing effort by 60% and improving system efficiency.
- Investigated and resolved production issues through log analysis, debugging, and monitoring, improving deployment reliability and application stability.

Software Developer Intern — Taprobane Trading

April 2024 – September 2024

React, Node.js, PostgreSQL, Redis, GraphQL, JWT, Linux

- Developed and tested scalable web application features using React, Node.js, GraphQL, and PostgreSQL in a Linux development environment.
- Built and maintained automated testing suites using Cypress and JUnit, achieving 92% test coverage and reducing post-release defects by 25%.
- Worked with Redis caching, JWT authentication, and API integrations to support secure and responsive application workflows.

Quality Assurance Intern — EatMe Global

June 2019 – September 2019

JUnit, Cypress, Enzyme, Linux

- Built a full-stack personal finance platform using React, Node.js, Supabase, and SQL with scalable API-driven architecture.
- Developed secure authentication, state management, and responsive UI workflows for transaction and budgeting features.
- Implemented automated testing using Cypress and optimized database queries for improved application performance.

Projects

FinBud

October 2024 – December 2024

React, Redux, Sass, Supabase, JUnit, Cypress, SQL, ER Modelling, Normalization

- Designed and optimized a relational database schema in 3NF and BCNF to improve data integrity and scalability.
- Developed complex SQL queries, joins, and reporting operations to support efficient data retrieval and analytics.
- Built Linux shell scripts to automate database interactions and streamline administrative workflows.

Enrollment Management System

October 2024 – December 2024

SQL, Oracle, ER Modeling, Normalization

- Created an optimized relational database schema adhering to 3NF and BCNF, ensuring data integrity and eliminating redundancy.
- Designed and implemented complex SQL queries, including multi-table joins, aggregations, and statistical operations, to support comprehensive data analysis and reporting.
- Developed a command-line interface using Unix Shell scripting to interact seamlessly with the Oracle database, enabling user-friendly data management.

Education

Toronto Metropolitan University (formerly Ryerson) - Toronto, ON

January 2023 - September 2025

B.Sc. in Computer Science

Relevant Courses: Data Structures & Algorithms, Web Development, Systems Programming, Machine Learning, Networking & Security, Database Design, UX Design.

AWS Certified Cloud Practitioner

May 2025
